

Green roofs

Mastic Asphalt is an ideal waterproofing material for extensive green roofs, intensive roof gardens and biodiversity roofs.

It is completely resistant to root penetration and does not require an additional anti-root barrier.

Features and benefits

- Enhances environment
- Improves aesthetic appearance
- Controls storm water run-off into surface water drainage system
- Reduces noise transmission by upgrading acoustic performance
- Improves thermal performance
- Improves ambient air quality
- Increases life expectancy of waterproofing membrane
- Extensive green roofs require little long-term maintenance
- Intensive roof gardens can be accessed for recreational use
